CREATIVE CODES

CODES

WHITEPAPER

1.Project About:

Creative Codes is an initiative that aims to create a customizable game with the support of artificial intelligence and maximize this experience.
It is built on Binance Smart Chain (BSC) with blockchain technology. Thus, it promises you a great experience by adding a new breath to the gaming industry.

Creative Codes, which allows you to develop games that you will both have fun and earn, allows you to collaborate and manage the process easily thanks to its wide network structure.

2.Main Parts:

Creative Codes is a gaming platform that combines artificial intelligence, customization and multiplayer functionality to deliver an immersive and rewarding gaming experience.

The foundation of the platform is the AIGameGeneration system, which uses advanced algorithms and machine learning techniques. This system can quickly and efficiently generate a wide range of games. Players can personalize their gaming experience with customization options including game themes, characters, gameplay mechanics and more. Real-time multiplayer functionality enables players to connect, compete, and collaborate with friends and enjoy a dynamic gaming experience together.

NFT integration provides players with ownership and trading mechanisms for in-game assets and collectibles. This allows players to convert their in-game assets into real money and trade them with other players.

Creative Codes is an innovative platform with the potential to revolutionize the gaming industry. The platform offers players a unique and customizable gaming experience, while providing developers with new tools and opportunities to create new games.

3. Game Creation System:

AI Game Creation System is Creative Codes game development engine. Developers can create unique and exciting games using this engine.

AI Game Creation System uses deep learning and neural networks to analyze players' preferences, game mechanics and in-game interactions. These analytics enable the generation of immersive and engaging games.

AI Game Creation System continuously improves itself using player feedback and game data. This allows it to deliver games that match players' preferences and interests.

Players can control the game creation process using customization options. This allows them to create games and personalized gaming experiences that match their preferences.

4. Token Overview:

The AICREA Token plays an important role in the Creative Codes ecosystem. It is used for various transactions such as purchasing in-game items, accessing premium features, participating in governance and voting. The AICREA token acts as the same benchmark of value within the platform.

5. Technology And Development:

Creative Codes offers high quality and diverse games in the gaming ecosystem using AI game production technology.

Deep learning and neural networks form the basis of the AI system. These models and networks enable sophisticated game creation processes, ensuring the quality of games, their adaptation to player preferences and enjoyable gaming experiences.

Creative Codes' infrastructure is designed to support variability and ensure smooth operation. Scalable architecture and server infrastructure are implemented to meet the growing user base. This ensures a seamless gaming experience even when demand increases.

Technologies such as Bitcoin Smart Chain provide advantages to users in terms of efficiency, security and cost-effectiveness.

Creative Codes uses encryption and data protection protocols, prioritizing the security and privacy of its users. Industry standard standard encryption protocols ensure confidentiality and integrity by securing user data. All smart contracts in the Creative Codes ecosystem minimize vulnerabilities and risks with comprehensive auditing processes by reputable third-party firms.

Creative Codes is a technology that has the potential to transform the gaming ecosystem. Using technologies such as artificial intelligence and blockchain, it aims to increase the quality, diversity and accessibility of games.

6. Road Map:

Stages 1 (Q1 2023 - Q3 2023): Project Development and Beta Versioning;

In this phase, the Creative Codes team starts refining the project idea, developing the first beta version and identifying the target audience of the project. The goal is to build the foundation of the project and gather feedback from early users and stakeholders.

Stages 2 (Q4 2023 - Q1 2024) : Feedback Collection;

To complete the development process of the Creative Codes platform by receiving feedback from beta users and make final adjustments to implement the first steps of the project.

Stages 3 (Q2 2024) : Performance Monitoring;

In this phase, we will monitor the servers on which the project is running and the experience of the users to ensure that they get the best performance. Our primary goal will be to ensure that our users use a smooth platform.

Stage 4 (Q3 2024) : Community and Partnership Structure;

In this phase, the goal is to create a platform for users and other game developers to build a close-knit community of cooperation. In this way, a better development can be made by exchanging ideas between users, and joint projects that developers can also take part in will be published.
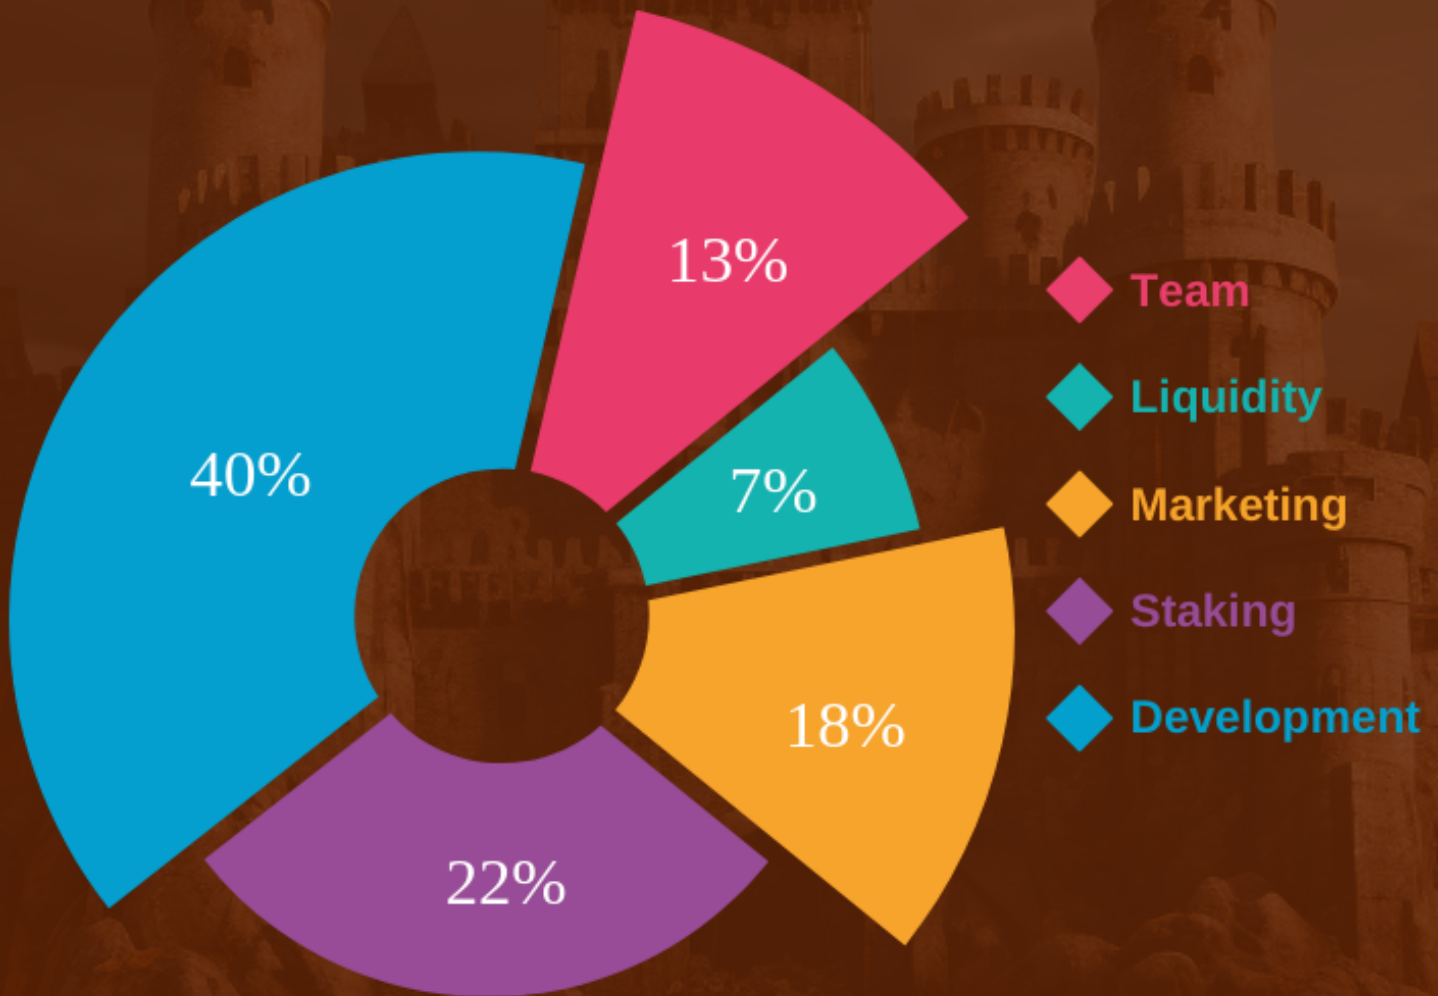

Stage 5 (Q4 2024) : Project Launch;

We will start a brand new beginning with the developed platform and beta version users. We will launch the platform and start marketing activities.

7. Tokenomic:

- 13% Team
- 7% Liquidity
- 18% Marketing
- 22% Staking
- 40% Development

Total Supply:

33.000.000.000
